

COMPLETE BLOOD COUNT (CBC) WITH AUTOMATED 5-PART DIFFERENTIAL

Patient Name:	Sunita Devi	Date of Exam:	September 14, 2026
MRN / Patient ID:	AIIMS-HEM-2026-1188	Age / Gender:	31 Yrs / Female
Blood Group & Rh:	O- (Rh Negative)	Referring Doctor:	Dr. Manoranjan Mahapatra, MD (Hematology)
Clinical Diagnosis:	Severe Aplastic Anemia (Post-Horse ATG Day +90)	Specimen / Source:	Whole Blood (K2-EDTA)

Test Parameter	Observed Result	Reference Range	Unit	Flag / Evaluation
Hemoglobin (Hb)	10.8	12.0 - 15.5	g/dL	Mild Anemia (Improved)
Total Leucocyte Count	4,820	4,000 - 10,500	/mCL	Normal Leukocyte Count
Absolute Neutrophil Count	2,460	1,500 - 7,000	/mCL	Sustained Neutrophil Engraftment
Absolute Lymphocyte Count	1,820	1,000 - 3,000	/mCL	Adequate Lymphopoiesis
Platelet Count	142,000	150,000 - 450,000	/mCL	Transfusion-Independent Recovery
Reticulocyte Count	1.92	0.50 - 2.50	%	Active Bone Marrow Output

CLINICAL INTERPRETATION & RECOMMENDATIONS:

- Demonstrates excellent hematologic recovery post-immunosuppressive therapy + cyclosporine maintenance.
- Absolute neutrophil count (ANC 2,460/mCL) and platelet count (> 140,000/mCL) confirm durable recovery.
- Patient has remained RBC and platelet transfusion-independent for the preceding 60 days.
- Recommendation: Continue current Cyclosporine-A dosing; titrate based on weekly trough levels.
