NABL & CAP CERTIFIED FLOW CORE

Report ID: MRD-FLOW-2026-8831
Barcode: MRD*0914*88314

MINIMAL RESIDUAL DISEASE (MRD) HIGH-SENSITIVITY 8-COLOR FLOW CYTOMETRY

Patient Name:	Aditi Roy Chowdhury	Date of Exam:	September 14, 2026
MRN / Patient ID:	MED-ONC-2026-0045	Age / Gender:	19 Yrs / Female
Blood Group & Rh:	AB- (Rh Negative)	Referring Doctor:	Dr. Ashok Vaid, MD, DM (Medical Oncology)
Clinical Diagnosis:	B-ALL Post-Induction Day +35 Evaluation	Specimen / Source:	Bone Marrow Aspirate in Sodium Heparin

Marker Parameter	Observed Count / %	Analytical Threshold	Sensitivity Limit	Interpretation
Total Events Acquired	5,240,000	>= 1,000,000	Flow Events	Ultra-High Sensitivity
CD19+ / CD10+ / CD34+ Blasts	< 0.005	< 0.010	% Total Cells	MRD Negative (< 0.01%)
Aberrant CD58 Overexpression	Not Detected	< 0.01	%	No Immunophenotypic Relapse
Aberrant CD66c Expression	Not Detected	< 0.01	%	Negative for Leukemia
Normal B-Cell Hematogones	2.4	0.5 - 5.0	% Total Cells	Normal Marrow Regeneration
Viability by 7-AAD	98.2	>= 85.0	%	High Sample Quality Verified

CLINICAL INTERPRETATION & RECOMMENDATIONS:

- High-sensitivity 8-color flow cytometry acquired > 5.2 million events (analytical sensitivity 10⁻⁵).
- MRD is strictly NEGATIVE at < 0.01% (< 1 leukemic blast per 10,000 nucleated marrow cells).
- Regenerating hematogones present, confirming healthy B-cell lineage marrow reconstitution.
- Recommendation: Favorable prognostic risk category; proceed with standard consolidation block.
