CRYOPRESERVED CELLULAR THERAPY GRAFT THAW, VIABILITY & RELEASE CERTIFICATE

Patient Name:	Arunachalam Venkatesan	Date of Exam:	September 14, 2026
MRN / Patient ID:	MAN-BMT-2026-0044	Age / Gender:	56 Yrs / Male
Blood Group & Rh:	B+ (Rh Positive)	Referring Doctor:	Dr. Mallikarjun Kalashetty, MD, DM (BMT)
Clinical Diagnosis:	Multiple Myeloma in VGPR (Day 0 Autologous Infusion)	Specimen / Source:	Thawed Autologous PBSC Bag #1 & Bag #2

Release Specification	Quality Standard	Lot Result	Testing Method	Release Status
Post-Thaw 7-AAD Viability	>= 70.0%	92.6%	Flow Cytometry	PASSED
Total Viable CD34+ Dosed	>= 2.5 x10^6/kg	4.88 x10^6/kg	Single Platform ISHAGE	PASSED
14-Day Bacterial Sterility	Negative (No Growth)	Negative	Automated BacT/ALERT	PASSED
14-Day Fungal Culture	Negative (No Growth)	Negative	Sabouraud Dextrose Agar	PASSED
Endotoxin LAL Testing	< 0.5 EU/mL	< 0.05 EU/mL	Kinetic Turbidimetric	PASSED
Cryoprotectant Residual	< 10% DMSO	6.2% Diluted	Osmolality Calculation	PASSED

CLINICAL INTERPRETATION & RECOMMENDATIONS:

- Cryopreserved stem cell graft meets all FACT and national standards for clinical patient infusion.
- Both bags inspected: integrity intact, label barcodes match patient MRN APL-BMT-2026-0044.
- Water bath thaw completed at 37.0 deg C in BMT sterile cleanroom with immediate bed-side transport.
- Recommendation: Infuse graft immediately under standard hydration and anti-histamine pre-medication.
