Overall FISH Score	Zero Aneuploid Metaphases	Normal Diploid	200 Interphase Nuclei	Normal MDS Panel

CLINICAL INTERPRETATION & RECOMMENDATIONS:

- Interphase FISH analysis of 200 nuclei reveals normal signal patterns for chromosomes 5, 7, 8, and 20.
- Zero high-risk myelodysplastic structural deletions detected; favourable post-therapy surveillance finding.
- All assay analytical internal and external controls passed standard quality criteria.
- Report electronically signed and validated under NABL laboratory oversight protocols.
